

The most recent (2004) Ohio Family Health Survey shows that Ohio has 156,000 uninsured children ages 0-17.

Here's the breakdown:

106,000: below 200% (already eligible, but un-enrolled)

18,000: between 200%-250%

12,000: between 250%-300%

20,000: over 301%

The 2008 Survey will be in the field in the next few months; the data will be available in 2009.
